

RISK DISCLOSURE

Definitions:

Margin: Funds required to open and maintain a position, acting as collateral against potential losses.

Leverage: The use of borrowed funds to increase position size, which can amplify both gains and losses.

CFD (Contract for Difference): A derivative allowing clients to speculate on price movements of an asset without owning it.

We are obligated by regulation to keep you informed of potential risks.

By entering into over-the-counter ("OTC") contracts for differences ("CFDs") and foreign exchange contracts ("FX Contracts") with **Amber Rock Trade Ltd** (the "Company"), the undersigned ("Customer," "you," "your") acknowledges, understands, and agrees to the following:

1. GENERAL RISK DISCLOSURE ON TRADING

Trading financial instruments, including CFDs and FX contracts, involves a high level of risk, it is not suitable for all investors and may result in losses that exceed your initial investment. Past performance is not indicative of future results, and clients should be aware that extreme market movements can lead to rapid and substantial losses. You should only trade with funds you can afford to lose and ensure that you fully understand the risks involved before engaging in any trading activity. Trading is for client that:

- Understand and are willing to accept the economic, legal, and other risks involved.
- Are experienced and knowledgeable in trading derivatives and underlying asset types.
- Are financially capable of sustaining losses exceeding their margin or deposits, as investors may lose the entire value of the contract, not just the margin or deposit.

CFDs and FX Contracts are not suitable for retirement funds. Trading in CFDs and FX Contracts represents one of the riskiest forms of investment and can result in substantial losses.

The Company is not responsible for losses resulting from market volatility, liquidity constraints, or other external factors beyond its control. The Company does not provide investment advice, and clients are solely responsible for their own trading decisions. This disclosure is prepared in accordance with applicable financial regulations, including MiFID II, FCA rules, and local jurisdiction requirements. By trading with the Company, clients acknowledge that they have read, understood, and accepted all associated risks and are financially and otherwise capable of

assuming the risks associated with trading CFDs and FX Contracts. The Customer acknowledges that the loss of their entire account balance will not affect their standard of living.

Clients are responsible for ensuring that trading in CFDs, FX contracts, or other financial instruments is suitable for their personal financial situation, risk tolerance, and investment objectives. If uncertain, clients should seek independent financial advice before trading. Clients must also maintain sufficient funds in their account to meet margin requirements and cover potential losses. By trading with the Company, clients acknowledge and accept their responsibility for all trading decisions and related risks.

2. RISKS DISCLOSURE ASSOCIATED WITH LONG CFD POSITIONS (FOR PURCHASERS OF CFDS)

Holding a long CFD position means you are purchasing CFDs with the expectation that the market price of the underlying asset will rise between the time of purchase and sale.

As the holder of a long position, you will generally realize a profit if the market price of the underlying asset rises while your CFD long position is open. Conversely, you will generally incur a loss if the market price of the underlying asset declines while the CFD long position is open.

Your potential loss could exceed the initial margin deposited. Additionally, a lack of sufficient liquidity to meet margin requirements could result in the closure of your position, which may result in a loss.

3. RISKS DISCLOSURE ASSOCIATED WITH SHORT CFD POSITIONS (FOR SELLERS OF CFDS)

Holding a short CFD position means you are selling CFDs with the expectation that the market price of the underlying asset will fall between the time of purchase and sale.

As the holder of a short position, you will generally realize a profit if the market price of the underlying asset falls while your CFD short position is open. On the other hand, you will generally incur a loss if the market price of the underlying asset rises while your CFD short position is open.

Your potential loss could exceed the initial margin deposited. Furthermore, if you do not have sufficient liquidity to meet margin requirements, your position may be closed, which could result in a loss. Rapid or extreme market movements, gaps in the market, or slippage may result in executions at prices significantly different from those expected. If you do not have sufficient liquidity to meet margin requirements, your position may be partially or fully closed, which could result in additional losses. For over-the-counter (OTC) contracts, including CFDs, there is also a counterparty risk, meaning the Company may be unable to fulfill its contractual obligations in certain circumstances. Clients acknowledge and accept these risks before entering short positions.

4. HIGH LEVERAGE AND LOW MARGINS CAN LEAD TO RAPID LOSSES

Both CFDs and FX Contracts involve a high degree of leverage or "gearing," which makes trading these instruments riskier than investing directly in the underlying asset. The margining system typically requires a small deposit relative to the size of the trade, meaning that even a small price movement in the underlying asset can have a disproportionately large effect on your trade. This can be both beneficial and detrimental.

A small price movement in your favor may result in a significant return on your deposit; however, a small price movement against you could result in substantial losses. For example, a leverage of 1:30 means that a \$1,000 deposit can control \$30,000 worth of trades.

Clients are required to maintain sufficient margin in their account to support open positions. If margin levels fall below required thresholds, margin calls may be issued, and positions may be partially or fully liquidated automatically without prior notice.

Your losses may exceed your initial deposit in highly leveraged positions. The greater the leverage, the higher the potential risk, and rapid market movements can result in immediate losses. Clients acknowledge and accept the risks associated with leveraged trading and understand that leverage directly influences the outcome of their investment.

5. MARGIN REQUIREMENTS

Client are required to maintain the minimum margin requirements for their open positions at all times and are responsible for monitoring their account balance. It is the Customer's responsibility to monitor their account balance.

If the margin in your account falls below the required level, you may receive a margin call, which will be communicated via email, platform notification, or other means specified by the Company, requiring you to deposit additional funds.

Failure to meet margin calls may result in immediate partial or full liquidation of your positions without prior notice. In the event of liquidation, positions may be prioritized according to the Company's internal procedures. Clients remain liable for any deficit if losses exceed their account balance. The Company reserves the right to close any or all open positions that do not meet the minimum margin requirement, which may result in your CFDs or FX Contracts being closed at a loss, for which Client will be liable.

6. CASH SETTLEMENT

The Customer acknowledges that CFDs and FX Contracts are cash-settled, with the difference between the buying and selling price determining the outcome of the investment. No physical delivery of the underlying asset occurs. Settlement is final, and the Customer assumes all market risk until the contract is closed. Clients are solely responsible for any tax treatment, reporting obligations, or regulatory requirements arising from their trading activity. Settlement timelines

may vary depending on the instrument type and market conditions, and delays can occur in certain circumstances. Clients acknowledge and accept these risks and responsibilities when trading with the Company.

7. OTC TRANSACTIONS

CFD and FX Contract transactions with the Company are conducted over-the-counter (OTC), meaning they are not executed on a recognized or designated investment exchange. All positions entered into with the Company must be closed with the Company and cannot be closed with any other entity.

OTC transactions may carry greater risk than on-exchange trades, as there is no exchange market in which to close an open position. This may make it difficult to liquidate an existing position, evaluate the value of an OTC transaction, or assess your exposure to risk. OTC pricing may differ from market prices, which can affect profitability, and the Company is not obliged to provide continuous liquidity. These factors may make it difficult to liquidate an existing position, evaluate the value of an OTC transaction, or assess your exposure to risk.

The Company may not always quote bid and ask prices in accordance with best execution policies. There is no central clearing and no third-party guarantee regarding the Company's payment obligations. You must rely on the Company for the performance of all contracts in your account, including the return of any margin or collateral. Potential conflicts of interest may exist in pricing and execution, and by trading OTC instruments, you acknowledge and accept these risks.

8. CFDS AND FX CONTRACTS

Trading CFDs and FX Contracts carries significant risks. The leverage involved means that even a small market movement can result in a much larger movement in the value of your liability. You should be aware of the implications of this, particularly in relation to margin requirements. Even small market fluctuations can disproportionately affect your account balance, and it is the Customer's sole responsibility to monitor positions and manage all associated risks.

9. PRICES, MARGIN, AND VALUATIONS ARE SET BY THE COMPANY AND MAY DIFFER FROM OTHER SOURCES

The Company will provide prices for trading, valuing Customer positions, and determining margin requirements in accordance with its Trading Policies and Procedures. The performance of your CFD or FX Contract will depend on the prices set by the Company and fluctuations in the underlying asset.

These prices may differ from those available from third-party sources, and the Customer accepts such differences. Market disruptions, technical issues, or delays may affect pricing, which can impact trade execution, valuation, and margin requirements. The Company determines valuation methodologies in line with its internal policies, and these methodologies may be updated from time to time.

10. EXTENT OF LOSSES

When you hold a short position and the price increases, your losses may not become apparent until you close the position. In certain scenarios, losses can exceed your initial margin deposits. Short positions can generate unlimited losses if prices move against your position. You should perform sufficient risk analysis, carefully consider your risk tolerance, and ensure that you can manage the risks associated with your position before entering any transaction.

11. RIGHTS TO UNDERLYING ASSETS

You have no rights or obligations concerning the underlying assets of your CFDs or FX Contracts. CFDs may be based on a variety of underlying assets, such as stocks, indices, currencies, and commodities. Holding a CFD or FX Contract does not grant you ownership of the underlying asset, nor does it confer any voting rights, dividends, or other benefits of ownership. All rights under these contracts are purely financial and relate solely to changes in the price of the underlying asset. CFDs may be based on a wide range of underlying assets, including stocks, indices, currencies, and commodities.

12. CURRENCY RISK

Investing in FX Contracts and CFDs involving an underlying asset in a currency different from your base currency carries currency risk. If the CFD or FX Contract is settled in a currency other than your base currency, fluctuations in exchange rates may impact the value of your return when converted into your base currency. Clients are responsible for monitoring currency risk and understanding its potential impact on their account. For example, if your base currency is USD and you hold a CFD denominated in EUR, a weakening of the EUR relative to USD could reduce the value of your returns, while a strengthening of the EUR could increase them. You should carefully consider the effect of currency movements on your potential gains and losses before entering into such transactions.

13. ONE-CLICK TRADING AND IMMEDIATE EXECUTION

The Company's online trading system facilitates immediate execution of Customer orders once the notional amount is entered, and "Buy/Sell" is clicked. Once an order is submitted, it cannot be canceled or modified, which increases the risk of unintended trades or losses. This feature may differ from other systems you may have used. Clients are strongly advised to practice using the demo trading system to become familiar with the Company's platform, order execution process, and the risks of immediate execution before trading with real funds.

By using the online trading system, you acknowledge and accept the immediate transmission and execution of orders and the associated risks, including the possibility of slippage and losses in rapidly moving markets.

14. THE COMPANY IS NOT AN ADVISER OR FIDUCIARY

Any market recommendations provided by the Company are general and not personal investment advice. The Company has not considered your individual financial situation, investment objectives, or personal circumstances, and it does not offer or solicit the purchase or sale of any financial instruments, including FX Contracts or CFDs. They do not constitute an offer to buy or sell any financial instruments, including FX Contracts or CFDs.

All decisions to enter into CFD or FX Contract trades are made independently by the Customer. The Company does not act as an advisor, fiduciary, or agent on behalf of the Customer and is not responsible for any investment decisions made by the Customer. Following the Company's recommendations or information is done entirely at the Customer's own risk.

Clients who are unsure about their investment decisions should seek independent financial advice before entering into any trades. The Company assumes no liability for any claims, losses, damages, or costs incurred as a result of relying on its recommendations or acting on any information it provides.

15. RECOMMENDATIONS ARE NOT GUARANTEED

The market recommendations provided by the Company are based on the judgment of its personnel and should be considered as general guidance only.

The judgment of Company personnel may be subjective, and the Company does not guarantee the accuracy, completeness, or success of any trade executed based on these recommendations. Past performance or prior recommendations are not indicative of future results.

The Customer acknowledges that any transaction entered into is made independently and based on their own judgment. Market recommendations are generic and may not be suitable for all investors or reflect the positions, intentions, or interests of the Company or its affiliates. While the Company strives for accuracy, it makes no representation that following its recommendations will reduce or eliminate the risks associated with trading CFDs or FX Contracts. Acting on these recommendations is done entirely at the Customer's own risk.

16. NO GUARANTEES OF PROFIT

Trading CFDs and FX Contracts involves a high risk of loss, including the possibility of losing your entire investment. There are no guarantees of profits or protection from losses when trading these instruments. The Customer acknowledges that no such guarantees have been provided by the Company or its representatives and that they are fully aware of the risks associated with trading CFDs and FX Contracts.

The Customer confirms that they are financially responsible for all losses and are capable of bearing any potential losses resulting from trading these instruments.

17. CUSTOMER MAY NOT BE ABLE TO CLOSE OPEN POSITIONS

In certain market conditions, such as periods of high volatility, low liquidity, or other extreme or unforeseen events (including force majeure), the Company may be unable to close a position at the Customer's desired price. The Customer acknowledges and accepts that such situations involve significant market risk and may result in losses, and agrees that the Company is not liable for any

losses, costs, or damages arising from the inability to execute orders at a requested price. Clients should understand that market conditions can cause rapid price fluctuations, gaps, or slippage, which may prevent positions from being closed at intended levels.

18. INTERNET TRADING

The Company is not liable for any claims, losses, damages, or expenses arising from technical failures, connectivity issues, cyber events, or other disruptions affecting the Company's systems, the Customer's systems, or any third-party platforms, networks, or exchanges outside the Company's control. Such issues may prevent the execution of orders, cause delays, or result in unintended transactions, and the Customer accepts full responsibility for any resulting losses or costs.

Clients are responsible for ensuring that they have reliable computer systems, internet connections, and backup plans to manage their trading activities. The Company does not guarantee uninterrupted or error-free access to its trading platforms or third-party networks, and any reliance on such systems is at the Customer's own risk.

19. QUOTING ERRORS

A quoting error refers to any incorrect, inaccurate, or unintended price provided by the Company in response to a Customer request, including, but not limited to, errors caused by system malfunctions, human input mistakes, or delays in data feeds.

In the event of a quoting error, the Company is not liable for any resulting discrepancies in account balances. The Company reserves the right, acting in good faith, to correct such errors and make any necessary adjustments to the relevant account. Any such adjustments may affect both realized and unrealized gains or losses in the Customer's account.

If there is a discrepancy between the quoted price and the actual market price, the Company will make reasonable efforts to execute the transaction as close to the prevailing market price as possible. The prevailing market prices will ultimately be reflected in the Customer's account statements. Clients acknowledge and accept that quoting errors are a risk of trading and that the Company is not responsible for losses resulting from such errors.

Should a Customer wish to raise a concern or submit a formal complaint regarding a trade or quoting issue, they must do so in writing to the Company's Compliance Department at compliance@tradertok.com. Complaints must include all relevant trade details and must be submitted within 14 calendar days of the trade or quoting error to allow for a timely and fair review.

20. UPDATES

The Company reserves the right to modify this Risk Disclosure Statement and its policies at any time, at its discretion, whenever it deems necessary or appropriate, including in response to regulatory or legal changes. Updated versions of this Risk Disclosure Statement and policies supersede all previous versions.

Clients are responsible for reviewing the most current Risk Disclosure Statement and associated policies regularly. Continued use of the Company's trading platform or services after any updates constitutes acceptance of the modified Risk Disclosure Statement and policies.

If changes are made, the Company will notify Clients using the contact information on file and will also upload the most current version to the Company's website. The Company will review and update this policy at least annually to reflect current practices, regulatory requirements, and market conditions. Clients are encouraged to review the updated disclosures before entering into any trades to ensure they are aware of all applicable risks.
